

SHEET METAL INDUSTRIES

January to December 1977

INDEX TO VOLUME 54

A	Page	Book Review: Dataquest Survey on British Tool and Gauge Makers	1106	Conspicuousness of vehicle colours	264
A case for the small power operated press	1045	'Professional Engineers and Industrial Relations Legislation'	1221	Continuously cast and rolled aluminium strip	229
A guide to more efficient fastening	139	Brazing. An introduction to mechanised	442	Control systems for metal forming and processing. Specialised	760
A new technique for deep drawing stainless steels	37	Bronze in forming dies. Aluminium	640	Copper—a material with a secure future	729
A view from the other corner	569	C		Copper-alloy condenser and heat-exchanger tube.	
Air/hydraulic punching. Development of	751	Captive fasteners for sheet metal. Selection and installation of	135	High-frequency induction-welded	677
Airfeed gives extra pulling and clamping power. Power press	222	Chief inspector advocates opto-electronic guarding	528	Copper-alloy sheet and strip production. Improvements in	637
Aluminium bronze in forming dies	640	CNC accuracy and speed in machine tool construction	482	Copper and brass sheet and strip for formability. The routine testing of	663
Aluminium and mild steel pressed products. Finishing	1213	Coil conveying by walking beams in rolling mills and associated operations	942	Copper and copper alloys. Markets for	633
Aluminium sheeting. A colourful future for	73	Coil. Surface inspection of stainless steel	51	Copper and copper alloys—past, present and future	351
Aluminium Stockholders Association—Fifteen years of service to the industry	381	Coil packaging equipment	935	Copper and its alloys. Lining and cladding with	978
Aluminium strip. Continuously cast and rolled	229	Coil processing equipment	6	Copper flat-plate solar collectors	654
An introduction to mechanised brazing	442	Coil processing equipment. Versatile ranges of	1004	Cost saving with stainless steel	55
Applications of magnets in the handling of sheet metal	928	Coining presses—yesterday and today	286	Cost savings in the sheet-metal industry	1146
Applying the advantages of coiled and narrow strip	202	Cold roll forming	380	Cupping tests. A practical look at biaxial stretch	240
Appointments	63	D			
Argon-oxygen decarburization process for stainless steel	47	Deep-drawing and redrawing of thin sheet materials	1180		
ASP high speed steels—new steels for cold work tools	463	Deep drawing stainless steels. A new technique for	37		
Astride the centuries	326	Defining the surface quality of sheet. New techniques for	13		
Austenite stability on pressing stainless steel. Effect of	23	Degreasing of strip metals. Vapour	82		
Austenitic stainless steels. Determination of the yield strength of	57	Determination of the yield strength of austenitic stainless steels	57		
Automatic machinery. Guarding and environmental aspects of	839	Developing a new concept in press design	756		
Automating press lines. A new way of	1190	Development of air/hydraulic punching	751		
Automation within the metal-forming industry	157	Developments in finish blanking and piercing	453		
Automotive radiator—a new design	658	Developments in mechanisms and machines for drawing sheet metal (Part 1)	334		
		(Part 2)	500		
		Developments in metal-finishing plant	1208		
		Developments in steel sheet and strip processing	333		
B				E	
Bar transfers in the manufacture of components from narrow strip	226	Comparative surface integrity study of laser cutting with other conventional cutting techniques. A	994	Eight million pound stainless plate finishing facilities opened at Sheffield	572
Basic forms and innovations of slitting and cut to length lines	920	Comparison of the static and impact strength of resistance spot welded mild steel sheet	764		
Bending equipment for heavy plate. Improving	258	Complete package system for new friction clutch machines	858		
		Connections in cold-formed sections	108		

Economic production of parts from strip	238	Forming limits of steel, copper and brass. Effect of predeformation and strain path on the	591	K	Kinghorn & Co. Ltd. Supplement	January
Economic situation—how it is affecting the machine and equipment manufacturers. The	720	Forming of sheet metal. Hydromechanic	162	L		
Economic situation—how it is affecting the machine and equipment manufacturers. The	730	Forming superplastic zinc on low cost tooling	1156	Laser cutting with other conventional cutting techniques. A comparative surface integrity study of		994
Economic situation—how it is affecting the user of sheet metal. The	724	Friction clutch machines. Complete package system for new	858	Lead and Zinc into the 80's		243
Economies of production in the usage of narrow strip	217	From metal basher to CNC	296	Letters to the Editor:		
Education and sheet metal engineering	731	G		Safety and productivity—not controversy		693
Effect of austenite stability on pressing stainless steel	23	Golden Jubilee. Sheet Metal Industries celebrates. Fifty years of service to the metals industry	604	G. S. Lyndon, Health & Safety Executive (electronic guarding systems)		1012
Effect of predeformation and strain path on the forming limits of steel, copper and brass	591	Guarding and environmental aspects of automatic machinery	839	A. H. Cole (new expanding metal press)		1012
Effects of the Health & Safety at Work Act on the use and design of welding equipment	817	Guarding press brakes. Improved systems for	830	D. V. Pull. A view from the other—'other corner' (guarding)		1111
Electrical contacts. The manufacture of	645	Guards. Principles on non-contacting protective	541	D. B. McNeil-Watson—Better than no guard at all?		1224
Electro magnetic presses. Improving the power of	1049	H		S. Shore—Metalworking '78 and effective guarding of exhibits		1225
Engineering analysis of the redrawing process. An (Part 2)	75	Handling of steel coil and strip	939	T. Anderson—Need to balance theory and practice		1225
Evaluation of steel galling and surface finish	147	Hannover. Metalforming equipment at	860	Leyland Cars. New line improves blanking efficiency at		1192
Exhibition demonstrates press feed progress	1104	Health and Safety at Work Act on the use and design of welding equipment. Effects of the	817	Lining and cladding with copper and its alloys		978
Expanded metal products. New facilities for	759	Heavy blanking improves production process	470	Look Back in Pride by John Hooper. Golden Jubilee 1927-1977		285
F		High-frequency induction-welded copper-alloy condenser and heat-exchanger tube	677	M		
Fasteners cuts costs. Single operation insertion of	121	High performance nickel electroplating of sheet metal and other components	1205	Machine tool construction. CNC accuracy and speed in		482
Fasteners for sheet metal applications. Threaded	122	High-strength formable steels. Saving money with Part I	1152	Magnets in the handling of sheet metal. Applications of		928
Fastening. A guide to more efficient	139	High temperature radiant ovens for sheet metal finishing	1218	Major stockholding expansion in north east		1024
Fifty years in the press shop Part 1	342	Hole and how much does it cost? Why make a	125	Manufacture of electrical contacts. The		645
Part 2	493	Hydraulic press developments increase range of applications	1051	Manufacture of tinplate in Wales before the advent of the continuous wide strip mill		365
Part 3	776	Hydraulic presses and equipment. Recent developments in	1065	Marine corrosion and fouling resistance. The use of copper and copper-alloy sheet and strip for		671
Part 4	958	Hydraulic punching lines for frame sections. Specialized	1075	Markets for rolled copper and copper alloys		633
Fifty years of change	301	Hydraulics facilitate flight forming	262	Mechanical Guarding systems. Some advantages of		808
Fifty years of service to the metals industry. Sheet Metal Industries celebrates Golden Jubilee	604	Hydromechanic forming of sheet metal	162	Metal-finishing plant. Developments in		1208
Finding a practical solution to pressing problems	607	I		Metal finishing today and tomorrow		1198
Fine-blanking—a changing technology	686	Improved finishes at lower cost. Pretreatment technology leads search for	1214	Metalforming equipment at Hannover		860
Fine blanking service. New facilities expand	478	Improved systems for guarding press brakes	830	Metal-forming industry. Automation within the		157
Finish blanking and piercing. Developments in	453	Improvements in copper-alloy sheet and strip production	637	Metalforming Machinery Makers Association. A guide to members		396
Finishing aluminium and mild steel pressed products	1213	Improvements in process line equipment over the past few years	947	Metalforming Machinery Makers Association. A year of growth and progress. Chairman's Report		1114
Five new metal inert gas welding products introduced	696	Improved bending equipment for heavy plate	258	Metalforming twenty-twenty seven		712
Flat-spring materials. Standard copper-alloy	683	Improving the power of electro magnetic presses	1049	Metal spinning and shear and flow forming Part 1		382
'Flexible' electroplating plant provides improved customer service	1220	Infra red Lightscreens—the right approach to photo-electric guards	550	Part 2		485
Flight forming. Hydraulics facilitate	262	Inspection of stainless steel coil. Surface	51	Part 3		586
Fluid-inflation process for forming tubular members. The	1081	Institute of Sheet Metal Engineering	86,	Metalworking 78	424, 433, 521, 625, 705, 801, 912, 1033, 1137	
Formability of sheet metal	971	167, 270, 390, 505, 600, 691, 783, 894, 1013, 1118, 1222		Mild steel sheet. A comparison of the static and impact strength of resistance spot welded		764
Forming and use of ferritic stainless-steel for stepped flexible metal roofing	66	Is it fifty years already?	294	Mild steel sheet. Production and formability of high-strength, low carbon		1087
Forming Limit Diagram. Usefulness of the theories of necking and inhomogeneity of the material in the description of the	842					

Modern slitting line technology—	
Part 1	953
Part 2	1097
Motor industry. A sheet metal die tooling programme in the	1166
Move puts more punching power into company's operations	154
Modern steel sheet. Production and formability of high-strength, low carbon	1087

N

Narrow strip. Applying the advantages of coiled and	202
Narrow strip. Bar transfers in the manufacture of components from	226
Narrow strip. Economies of production in the usage of	217
NC—why invest when you can buy time?	253
'Necessary Evil'—True or False?	826
New facilities expand fine blanking service	478
New facilities for expanded metal products	759
New £500 000 completely automatic cold rolling mill now in operation at Daventry	1108
New line improves blanking efficiency at Leyland Cars	1192
New method of producing sheet-metal panels. A	1178
New methods of providing safety on machinery with minimum production loss	834
New press guard system designed to improve productivity	822
New techniques for defining the surface quality of sheet	13
New way of automating press lines. A	1190
Nickel electroplating of sheet metal and other components. High performance	1205

O

Offcuts	85, 497, 750, 1116
Open front power presses from 1927	320
Opto-electronic guarding. Chief inspector advocates	528

P

Panels. A new method of producing sheet-metal	1178
Photo-electric guarding. Twenty-five years of	536
Powder coating of sheet metal products	1210
Power press airfeed gives extra pulling and clamping power	222
Practical advancements in slitting technology—increase profits and minimise payback periods	741
Practical look at biaxial stretch cupping tests. A	240
Preparing for the metal forming revolution	362
Press brake and computer numerical control	297
Press design. Developing a new concept in	756
Press feed progress. Exhibition demonstrates	1104
Press guard system designed to improve productivity. New	822

Pressing for more time is pressing for money	1170
Pressing problems. Finding a practical solution to	607
Pressing. Tailor-made for safer	557
Pretreatment technology leads search for improved finishes at lower cost	1214
Principles on non-contacting protective guards	541
Process line equipment over the past few years. Improvements in	947
Production and formability of high-strength, low-carbon mild steel sheet	1087
Profile of new director general of The Welding Institute	1020
Punch press solid state clutch control	1056
Punching power into company's operations. Move puts more	154

R

Radiant ovens for sheet metal finishing. High temperature	1218
Radiator—a new design. The automotive	658
Range of electro-mechanical testing machines introduced	786
Rationalization of stainless steel specifications	29
Recent developments in hydraulic presses and equipment	1065
Redrawing process. An engineering analysis of the (Part 2)	75
Roofing. Forming and use of ferritic stainless-steel for stepped flexible metal	66
Routine testing of copper and brass sheet and strip for formability. The	663

S

Safety in the use of sheet metal forming machines Part 1	561
Part 2	983
Safety on machinery with minimum production loss. New methods of providing	834
Saving money with high strength formable steels—Part I	1152
Selection and installation of captive fasteners for sheet metal	135
Selling safety techniques to the outside world	201
Sheet metal die tooling programme in the motor industry. A	1166
Sheet-metal industry. Cost savings in the	1146
Sheet Metal News	5, 101, 189, 435, 523, 627, 707, 803, 915, 1035, 1141
Sheet Metal Plant & Equipment	90, 169, 272, 506, 610, 694, 788, 896, 1015, 1120, 1225
Sheet metal products. Powder coating of	1210
Silver and Golden Jubilee link	306
Single operation insertion of fasteners cuts costs	121
Slitting technology—increase profits and minimise payback periods. Practical advancements in	741
Slitting and cut to length lines. Basic forms and innovations of	920
Slitting line technology. Modern. Part 1	953
Part 2	1097

Small power operated press. A case for the	1045
Small presses increase in popularity	1072
Solid state clutch control. Punch press	1056
Solomon Grundy—it's already Friday	749
Some advantages of mechanical guarding systems	808
Some developments in welding processes and techniques during the past fifty-five years. Part 1	373
Part 2	577
Part 3	962
Specialized control systems for metal forming and processing	760
Specialized hydraulic punching lines for frame sections	1075
Specialized production of terminals from narrow strip	205
Stainless now established on five continents. Coloured	41
Stainless plate finishing facilities opened at Sheffield. £8M	572
Stainless steel. Argon-oxygen decarburization process for	47
Stainless steel. Cost saving with	55
Stainless steel. Effect of austenite stability on pressing	23
Stainless Steel Fabricators' Association	358
Stainless steel for stepped flexible metal roofing. Forming and use of ferritic	66
